ROUTING

FEED FOR THE YOUNG DUCKS

Ducklings Do Not Require Nourishment Until They Are at Least Twenty-Four Hours Old.

Don't feed anything until the ducklings are at least 24 hours old, but they should have a little tepid water to drink, especially if the weather is very warm or if they have been hatched in an incubator.

Don't have the water within reach for very long at a time, as they will soon begin to "paddle."

Begin by placing a little dry bread, crumbled fine in the water which should always be given in shallow pans while the ducklings are small. Skim milk is used once or twice a day to soak the bread in instead of water, but be sure that there is no cream about the milk.

Coarse, sharp sand should be put in the water or placed near the vessel but never mixed with the feed. Some people do this after the ducks get old.

Runner Duck.

enough to eat grain mixtures but it is not a good plan, for when grit of any kind is put in the feed the ducks are often forced to eat more grit than they require.

Rolled oats in water is good to feed once in a while for a change; it may also be fed dry. Corn cake is good occasionally but not often.

Some sort of green stuff is necessary, even while the ducklings are very small. In fact they will eat "greens" almost from the start. Lettuce, onion tops or dandelion leaves chopped fine are always relished, no matter if the grass is plentiful.

Young ducks should be fed from four to six times a day, according to the variety. Pekin ducks are the larger feeders and grow very fast; they require more feed than other ducks although they must not have feed that is highly concentrated. That is, it should be sufficiently nourishing but not too fattening.

KEEP EGGS IN WATER-GLASS

Receptacle Should Be Placed in Cool Cellar and Covered Over to Prevent Evaporation.

(By C. E. BROWN, Crookston Experiment Station.)

There are several good methods of preserving eggs, but the water-glass method is the best. Water-glass can usually be purchased at a local drug store for less than \$1 a gallon, making the cost about one cent for each dozen eggs.

The receptacle used should be an earthenware jar of from five to ten gallons. The eggs should be placed in the jar each day, when gathered, as the fresher the egg the better it will keep. Care should be exercised to see that none of the eggs is cracked, or the whole jar of eggs may be spoiled in a short time.

The jar should be placed in a cool cellar; a piece of oiled paper or some other water-proof cover should be placed over to prevent evaporation. If this is not done, any eggs that appear above the liquid will spoil rapidly. The eggs should be kept at least two inches below the surface of the liquid.

The solution recommended is one part of water-glass to ten parts of pure water.

INFERTILE EGGS GAIN FAVOR

Markets Are Gradually Coming to Discriminating Price on This Kind of Eggs for Trade.

Just as soon as the hatching season is over sell or kill the roosters so that your eggs will be infertile. Infertile eggs keep much better than fertile eggs. Gradually the markets are coming to a discriminating price on infertile eggs, especially for the best trade. As soon as the consumers get wise the demand will be greater.

Several states have instituted annual swat-the-rooster campaigns, and thus the people are made acquainted with the value of the infertile eggs.

Summer Care of Ducklings.

Water fowls need special attention during warm weather. Young ducklings feel severely the excessive heat. Exposure to the sun frequently gives them what is termed "blind staggers." The heat coming down on their heads affects their brains, they whirl about as if crazed and die of the effects of overheating.

JUSTICE TO PLUMBER

Writer Calls a Halt on the Venerable Joke.

"Skilled Scientist" Is New Appellation Given Him, and It May Be That He Will Be Held Deserving of It.

Time to call a halt on the venerable joke about the plumber. He is a skilled scientist, just as is the surgeon a trained and highly intelligent artist. The only difference is that one ministers to a body diseased or smashed up in some of its essential parts, and the other ministers to the larger organism in which a group of humans make their home, healing its diseases so far at least as they have to do with the circulatory and other important systems upon which the health of the whole depends.

For instance: the other day something went wrong with Smith's house in its most vital parts. The kitchen boiler cracked, to be definite. The symptoms could be interpreted by anybody, and clearly a major operation was immediately necessary. The skilled surgeon was summoned. It was decided that the house should have a new heart. Also after consultation and mature consideration it was determined that certain minor defects of the circulatory system, as leaking taps and insufficient valves, should be patched up and put on the job again. The cisterns no longer should murmur.

Alas! The following night Smith was awakened by the steady dripping of water close by the side of his couch. The candle which was hurriedly procured showed that upon the ceiling there was a circular patch of wetness rapidly gaining in size. Quizzical investigations showed that all seemed to be in order. The ear applied to walls and floors detected no gaspings or gurglings. The reservoirs seemed to maintain their correct levels. The telephone emergency call got from the nearest plumber, after a half hour of rather wild work, merely the advice—"Tap on the supply pipe with a hammer." That was not entirely satisfactory, and another plumber was summoned. He measured, calculated and listened. He finally diagnosed thus: "Must be the supply pipe just before it enters the top of the reservoir."

And all hands went over to the house, turned off the supply in the cellar, drained the cisterns and sought peace and sleep once more.

In the morning the plumber made his official call. A brief examination convinced him that his colleague's diagnosis of the night before had been correct. Serious measures being necessary, he began to pull up floors and remove baseboards. Thus there were laid bare the secrets of the anatomy of the house. All the hidden organs were revealed. Wires and

pipes and traps and mysterious appliances hidden beneath paint and wall paper acquired a threatening look, and the observer could not but wonder what might happen if they should once take possession of the premises on their own account.

Examination by the master surgeon, with Mr. Smith trailing at his heels, revealed no serious lesions nor fractures. A temporary restoration of circulation showed no flaw in the main arteries. Mr. Smith in despair mentioned one or two of the emergency measures of the night before, the minor adjustments of taps and valves. The surgeon smiled. "Fill up the cisterns and wait," he said. The pipes began to throb. The water rose to the customary level. When the top of the reservoir filled and the noise was reduced to the minimum, there it was again.

There in the bedroom—"Drip, drip," it came again.

The flaw was found at last. It was in the waste or overflow pipe of that top reservoir. For the seventeenth time the weary Mr. Smith climbed to the top of his house. There was a short spout, perhaps six feet long that made the whole trouble.—Boston Herald.

Made a Difference.

At a dinner party the other evening, reference having been made to the good old days in the little brick schoolhouse, this story was recalled by James L. Rice, coach of the Columbia college crew:

The teacher in a public school was giving a demonstration in mental arithmetic, and after speaking at some length she turned to a bright-faced boy at the head of the class.

"Now, then, Willie," said she, "do you think that you can answer me a question in mental arithmetic?"

"Yes, ma'am," was the confident rejoinder of the beaming youngster.

"Well, then," resumed the teacher, "how old would a person be who was born in 1876?"

"That depends," quickly rejoined little Willie. "Was the person a man or a woman?"—Philadelphia Telegraph.

A Change of Luck.

Hicks—How do you happen to be going fishing on Friday? I thought you believed Friday was an unlucky day?

Wicks—Well, I always have, but it occurred to me this morning that perhaps it would be unlucky for the fish!

Beautiful Neutrality.

The Venus of Milo explained. "An endeavor to be neutral," she said; "arms are munitions of war."

The trouble about looking up to other people is that it encourages them to look down on us.

All men are born ignorant and some never get over it.

Art at best turns out a poor counterfeit of nature.

WANTED TO SEE THE FINISH

Small Girl Did Not Consider That the End of the Proceedings Had Been Reached.

The short interval that elapsed between the visit of the little girl to a commencement exercise and attendance at an old-fashioned camp-meeting may explain a remark that she made at the religious event. She went there with her grandmother, and, very much interested in everything that occurred, asked numerous questions which her grandmother attempted to answer to the best of her ability.

"Who is that woman up there and what is she doing?" asked the little girl, referring to a woman who was on her knees in the "amen corner."

"I don't know who she is, but she's going to get religion," was the reply.

Some time elapsed and the woman remained on her knees. Finally, the grandmother of the little girl became tired of the service and announced that it was time to leave.

"Oh, let's not go yet," exclaimed her grandchild. "Let's wait and see 'em give it to her."—Louisville Times.

Touch Pre-eminent.

"A cozy picture, eh? A man looting in an easy chair and his beautiful wife leaning over him to light his cigar."

"You haven't seen the companion picture to it, have you?"

"Why, no."

"It's the same man savagely chewing the end of his cigar and writing a check!"—Kansas City Star.

Extravagance.

"Well, my dear," said the head of the family jubilantly, "I closed the deal for the new house today. I had the title searched and found it perfectly clear. It cost me a hundred dollars for the search, but—"

"Now isn't that a perfect shame!" interrupted his better half. "All that money wasted for nothing."

A Difference.

Angelina—And so you love me with all your heart? Would you die for me?

Edwin—No, dear.

Angelina—You wouldn't die for me?

Edwin—No; mine is an undying affection.

Couldn't Do It.

"I want you," said the fair society leader, "to give me a plain opinion about my latest photograph."

"Madam," said the gallant cavalier, bowing, "to speak in plain terms of that portrait would be impossible!"

What is worth doing at all is worth doing well, unless you are going to make a fool of yourself.

Time is money, yet lots of people with plenty of time on their hands will strike you for a loan.

All things come to him who waits, but he is generally dead by the time they reach him.
